

TimberTech DockSider™ Plank

Revolutionary Alternative to Wood Docks

TimberTech® DockSider Plank is ideal for dock, marina and boardwalk applications. It resists fading, weathering, rotting and warping. The VertiGrain surface provides the look of wood and reduces slippery conditions when wet.

Features and Benefits

- Engineered for maximum strength to weight efficiency.
- Spans 24" on-center*.
- Low-maintenance surface does not rot or split when exposed to moisture and stands up to heavy traffic.
- Splinter-free surface doesn't need painting, staining or sealing.
- Square edge profile provides well defined lines and accents.
- Available in Cedar and Grey.

Actual dimensions 1-1/4" x 5-1/2"

Fastening Guidelines

When fastening the DockSider Plank, a #8 x 3" stainless steel, composite or high quality coated screw must be used.

- For seaside applications, a 316 standard marine grade stainless steel fastener is required.
- For all other water applications stainless steel is recommended.

If nailing the DockSider Plank, a 3" 10d stainless steel ring shank nail is recommended. The DockSider Plank requires a minimum gap of 1/8" side-to-side and at butt joints.

*Spans are stated for residential and commercial applications.
